

H1 Heading

Plugin for Joomla! 3 & 4

This manual documents **version 5.x** of the Joomla! extension.

<https://www.aimy-extensions.com/joomla/h1-heading.html>

1 Introduction

Joomla! is a great content management system. However, it has its own tiny flaws. Aimy H1 Heading is there to fix one of these, namely the use of an **H2** heading where an **H1** heading would be appropriate in the first place.

This way you can improve your SEO success and improve the logical structure of your content.

This manual guides you through all steps necessary to install and use the plugin.

2 Installation

The installation of the extension follows the common Joomla! procedures.

In case you are not familiar with these procedures, proceed as follows:

1. Download the extension's ZIP archive
2. Log into your Joomla! backend as "Super User"
3. From the menu, choose "*Extensions*" → "*Manage*" → "*Install*"
4. Click on the "*Or browse for file*" button and select the ZIP archive

The extension's archive will be uploaded and installed afterwards.

For further information, please have a look at the Joomla! documentation "*Installing an Extension*".

NOTE: All plugins are disabled by Joomla! when installed for the first time. To enable Aimy H1 Heading, proceed and configure the plugin.

3 Configuration

After a fresh installation, click on the "*Configure plugin now*" button on the installation report page.

At any time, you can configure the Aimy H1 plugin using Joomla!'s Plugin Manager by choosing "*Extensions*" → "*Plugin Manager*" from the menu. Locate the plugin and click on its name in the "*Plugin Name*" column of the plugin listing.

3.1 Enabling the Plugin

In order to use the plugin's functionality, you have to enable it first.

To do so, change the plugin's status from "*Disabled*" to "*Enabled*" and apply your changes by clicking on either the "*Save*" or "*Save & Close*" button in the toolbar.

The default configuration of Aimy H1 Heading will take care of upgrading the first **H2** heading to an **H1** one automatically for common Joomla! components that require this fix.

3.2 Plugin Options

Aimy H1 Heading's functionality can be suited to your needs using the following configuration options:

The screenshot shows the Joomla! Plugin Manager interface for the 'System - Aimy H1 Heading' plugin. At the top, there is a blue header with a lightbulb icon and the text 'Plugin Manager: System - Aimy H1 Heading'. Below the header are three buttons: 'Save' (green), 'Save & Close' (green with a checkmark), and 'Close' (red with an 'X'). A 'Plugin' tab is visible. The main content area is titled 'System - Aimy H1 Heading' and includes a breadcrumb 'system / aimyh1heading'. The description is 'Adds missing H1 headings'. There are three configuration options, each with a 'Yes' and 'No' radio button: 'Show context *' (set to 'No'), 'Exclude these contexts' (with a text area containing 'com_content.category', 'com_content.archive', and 'com_content.featured'), and 'Check H1 headings *' (set to 'No').

Show context

This option helps you to find the contexts you might need in the exclude patterns.

If enabled, a box is displayed on each page in the frontend of your website that shows the name of its context.

Please remember to disable this option when you have finished the configuration.

About Us

Exclude these contexts

With exclude patterns you can define, on which pages Aimy H1 Heading should not change the heading to H1.

The contexts are given as a list with one context per line.

NOTE: A context consists of the internal component and view name, that generate the page's output, separated by a full-stop, i.e. `com_content.category`.

NOTE: You can use wildcards like `com_contact.*`.

Check the number of H1 headings

If enabled, the number of H1 headings present in the current *component output* is checked in the frontend. If there is more than a single H1 heading, any of these will be visually highlighted.

Please remember to disable this option when you have finished testing.
